

I. OVERVIEW

UCLA participates in Data Registries such as the American College of Surgeons National Surgical Quality Improvement Program® (ACS NSQIP®), pediatric version of ACS NSQIP, Metabolic and Bariatric Surgery Accreditation and Quality Improvement Program MSBAQIP, and the Vascular Quality Initiative® (VQI®) of the Society for Vascular Surgery® (SVS) to name a few. The data registries provide validated data from patients' medical records to quantify 30-day risk-adjusted surgical outcomes, including post-discharge. In turn, this allows our providers the opportunity to reduce the number of patient complications, improve patient outcomes, shorter length of stays and greater patient experience. Data Registries provide robust reports on performance information to guide surgical care and identify areas for improvement for the greatest return and highest impact, and an opportunity for our providers to participate in regional and virtual collaborative with other hospitals.

For the hospital, the data registries help reduce postoperative mortality and complication rates, lower costs of care, enhanced community reputation through improved patient outcomes, recognition among government and national quality organizations such as "*Center of Excellence*". In addition, using ACS NSQIP satisfies Joint Commission OPPE requirements which is noted on the Joint Commission's Quality Check website and satisfies CMS' surgical quality measure (NQF #0493) as in "Participation in a Systematic Clinical Database Registry for General Surgery."
